Product Summary: Spooks

Spooks are the new high tech ghost detection specks. These state of the art specks are able to detect and differentiate the danger levels of ghosts. There will be built in lazars that will send your choice of ghosts away. With a simple press of a button, you will only be surrounded by the cool ghosts.

Audience

Spooks' target audience range in ages 16-40. This age range would consist of teenagers, young adults, and adults – the Millennials and Generation Z. This would be a luxury item for those who are able to afford them. Due to costly production, audience members in the "upper-class" would consider buying this product. The rest will have to deal with ghosts.

Sketches

Aesthetic Approach

Why glasses? Because they are portable, fashionable, and easy to use!

Interface Design

By using the **LDR**, users can look around to identify ghosts by revealing the hidden ghosts in alternate dimensions . By turning the **potentiometer**, users are able to identify which ghosts are friendly or not. **Red** will appear on the dangerous ghosts, while **green** will appear on the friendly ghosts. Lastly, the **button** is used to transport the ghost(s) out of sight.
